1.INTRODUCTION

1.1 Project Overview

Category: Cloud App Development

Team ID : PNT2022TMID19407

Skills Required:

IBM Cloud,HTML,Javascript,IBM Cloud Object Storage,Python-Flask,Kubernetes,Docker,IBM DB2,IBM Container Registry

Project Description:

In simple words, personal finance entails all the financial decisions and activities that a Finance app makes your life easier by helping you to manage your finances efficiently. A personal finance app will not only help you with budgeting and accounting but also give you helpful insights about money management.

Personal finance applications will ask users to add their expenses and based on their expenses wallet balance will be updated which will be visible to the user. Also, users can get an analysis of their expenditure in graphical forms. They have an option to set a limit for the amount to be used for that particular month if the limit is exceeded the user will be notified with an email alert.

1.2 Purpose

Personal finance management is an important part of people's lives. However, everyone does not have the knowledge or time to manage their finances in a proper manner. And, even if a person has time and knowledge, they do not bother with tracking their expenses as they find it tedious and time-consuming. Now, you don't have to worry about managing your expenses, as you can get access to an expense tracker that will help in the active management of your finances. Also known as expense manager and money manager, an expense tracker is a software or application that helps to keep an accurate record of your money inflow and outflow. Many people in India live on a fixed income, and they find that towards the end of the month they don't have sufficient money to meet their needs. While this problem can arise due to low salary, invariably it is due to poor money management skills.

People tend to overspend without realizing, and this can prove to be disastrous. Using a daily expense manager can help you keep track of how much you spend every day and on what. At the end of the month, you will have a clear picture where your money is going. This is one of the best ways to get your expenses under control and bring some semblance of order to your finances. Today, there are several expense manager applications in the market. Some are paid managers while others are free. Even banks like ICICI offer their customers expense tracker to help them out. Before you decide to go in for a money manager, it is important to decide the type you want.

2.LITERATURE SURVEY

2.1 Existing problem

In a study conducted by Forrester in 2016 surveying small and medium businesses (SMBs) across the world, 56% companies reported expense management as being the biggest challenge for their finance departments.

In another survey conducted by Level Research in 2018 in North America, respondents reported the following pain points in expense management before adopting automation:

- Manual entry and routing of expense reports (62%)
- Lack of visibility into spend data (42%)
- Inability to enforce travel policies (29%)
- Lost expense reports (24%)
- Lengthy expense approval system and reimbursement cycles (23%)

(2021) | Facilitates The User To Keep Track And Manage Their Personal As Well As Business Expenses. | Android OS | Cloud Application | Advantages: ➤ Become Aware Of Poor Spending Habits And Take Care Of Your Finances Saving And Investment. Disadvantages: ➤ Searching And Referencing Is Difficult And Time-consuming. |
| 4. | EXPENSE TRACKER. (May 2021) | The Application Keeps The Track Of The Income And Expenses Both Of User On A Day To Day Bases | Java | Cloud Application | Advantages: ➤ The Project Effectively Keeps Away From The Manual Figuring. Disadvantages: ➤ Report Generation Is A Tedious Process. |

2.3 Problem Statement Definition

Customer Problem Statement :

A well-articulated customer problem statement allows us to find the ideal solution for the challenges our customers face. Throughout the process, you'll also be able to empathize with

| | | |
|----------------------------|---|---|
| I am | Describe customer with 3-4 key characteristics - <i>who are they?</i> | Describe the customer and their attributes here |
| I'm trying to | List their outcome or "job" the care about - <i>what are they trying to achieve?</i> | List the thing they are trying to achieve here |
| but | Describe what problems or barriers stand in the way - <i>what bothers them most?</i> | Describe the problems or barriers that get in the way here |
| because | Enter the "root cause" of why the problem or barrier exists - <i>what needs to be solved?</i> | Describe the reason the problems or barriers exist |
| which makes me feel | Describe the emotions from the customer's point of view - <i>how does it impact them emotionally?</i> | Describe the emotions the result from experiencing the problems or barriers |

Personal Expense Tracker Application:

| | | | | |
|--------------|--------------------------------------|---|-----------------------------------|---------------------|
| I am | I'm trying to | But | Because | Which makes me feel |
| a Traveller. | track my expenses during every trip. | unable to sort out my expenses with my records. | there is no root for me to do so. | worried. |

your customers, which helps you better understand how they perceive your product or service.

| Problem Statement (PS) | I am (Customer) | I'm trying to | But | Because | Which makes me feel |
|------------------------|-----------------|----------------------------|---|--|---------------------|
| PS-1 | an employee. | Make a monthly budget. | There are no facilities to set a budget. | I need to save money for my future plans. | Frustrated. |
| PS-2 | A manager. | Keep track of my expenses. | Can't categorize the various types of expenses. | There is no option to organize the various expenses. | Uncomfortable. |

3.IDEATION & PROPOSED SOLUTION

3.1 Empathy Map Canvas

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes.

It is a useful tool to help teams better understand their users.

Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user's perspective along with his or her goals and challenges.

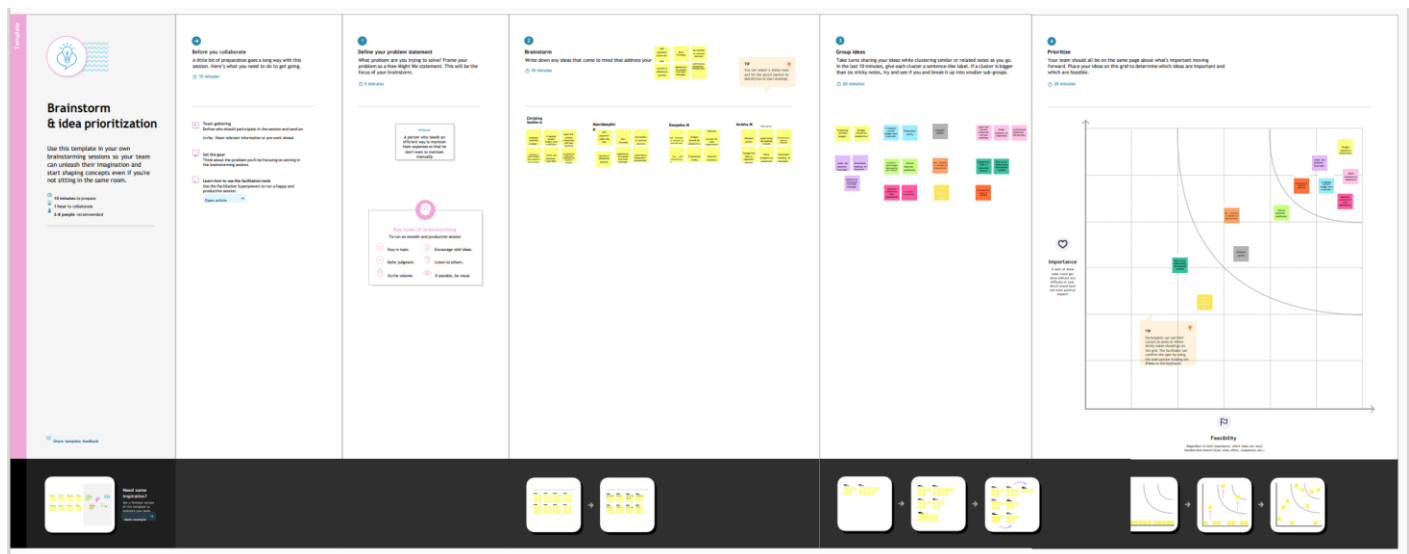

3.2 Ideation & Brainstorming

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Step-2 : Brainstorm,Idea Listing and Grouping

Step-3: Idea Prioritization

3.3 Proposed Solution

| S.No. | Parameter | Description |
|-------|--|---|
| 1. | Problem Statement (Problem to be solved) | The problem of the current generation population is that they can't remember where all of the money they earned have gone and ultimately have to live while sustaining the little money they have left for their essential needs. |
| 2. | Idea / Solution description | Tracks expenses through bank statements and details provided by the user and sends notification alerts when the suggested savings goal set by the user themselves is crossed. |
| 3. | Novelty / Uniqueness | Basic finance tips can be given to users and also a plan to let users earn a small amount of money through ads etc. |
| 4. | Social Impact / Customer Satisfaction | This helps the user to help them from issues like bankruptcy and save time from manual calculations. Also providing a proper balance |

| | | |
|----|--------------------------------|--|
| | | between income and expense is a must for a comfortable livelihood. |
| 5. | Business Model (Revenue Model) | Expense tracker follows service business model which uses Flask, Docker, Cloud and Kubernetes. |
| 6. | Scalability of the Solution | Expense tracker is infinitely scalable since it is based on a per employee per month basis, this means that we'll never pay for capacity you don't need. |

3.4 Problem Solution fit

Template:

| Problem-Solution fit canvas 2.0 | | Purpose / Vision |
|--|---|--|
| Define CS, fit into CC | 1. CUSTOMER SEGMENT(S) CS Who is your customer? i.e. working parents of 0-5 y.o. kids Students, Adults and Families Organizations, Individuals | 6. CUSTOMER CONSTRAINTS CC What constraints prevent your customers from taking action or limit their choices of solutions? i.e. spending power, budget, no cash, network connection, available devices. Even with constant tracking of one's spending habits, there is no guarantee that financial goals will be met. So they might think it is useless to use an expense tracker. Expense tracker might need internet connection to access the user's database. |
| | | 5. AVAILABLE SOLUTIONS AS Which solutions are available to the customers when they face the problem or need to get the job done? What have they tried in the past? What pros & cons do these solutions have? i.e. pen and paper is an alternative to digital notetaking. Manually calculate the daily expenses using a notebook and a pen. They can use a budget calculator. |
| Focus on J&P, tap into BE, understand RC | 2. JOBS-TO-BE-DONE / PROBLEMS J&P Which jobs-to-be-done (or problems) do you address for your customers? There could be more than one, explore different sides. Users need to login and register so that the database can easily identify their previous expenses. Users need to provide their receipts and bills which shows the amount they spent. User needs to set a savings goal that will prevent them from spending more than their budget for the month. | 9. PROBLEM ROOT CAUSE RC What is the real reason that this problem exists? What is the back story behind the need to do this job? i.e. customers have to do it because of the change in regulations. If you don't check your spending and create a budget, you will have no control whatsoever on your money. Instead, money will control you, and you will either have perpetual lack of funds or you will end up steeped in debt. With proper tracking of your finances, you will not be able to determine unnecessary spending. This spending, if saved, can easily add up to quite a bit. |
| | | 7. BEHAVIOUR BE What does your customer do to address the problem and get the job done? i.e. directly related: find the right solar panel installer, calculate usage and benefits; indirectly associated: customers spend free time on volunteering work (i.e. Greenpeace) Collect receipts regularly without fail. Know your budget for each month and set appropriate savings goal. |
| Identify strong TR & EM | 3. TRIGGERS TR What triggers customers to act? i.e. seeing their neighbour installing solar panels, reading about a more efficient solution in the news. When they realise they don't have enough money to spend for either themselves or during outing with acquaintances. | 10. YOUR SOLUTION SL If you are working on an existing business, write down your current solution first, fill in the canvas, and check how much it fits reality. If you are working on a new business proposition, then keep it blank until you fill in the canvas and come up with a solution that fits within customer limitations, solves a problem and matches customer behaviour. Tracks expenses through bank statements and details provided by the user and sends notification alerts when the suggested savings goal set by the user themselves is crossed. |
| | 4. EMOTIONS: BEFORE / AFTER EM How do customers feel when they face a problem or a job and afterwards? i.e. lost, insecure > confident, in control - use it in your communication strategy & design. fear, guilt, shame and envy-->happy, contented | 8. CHANNELS of BEHAVIOUR CH 8.1 ONLINE What kind of actions do customers take online? Extract online channels from #7 and use them for customer development. Reduced turnaround time and faster reimbursements 8.2 OFFLINE What kind of actions do customers take offline? Extract offline channels from #7 and use them for customer development. Expense tracker provides the option to set up custom reminders and notifications to remind they have reached the savings goal. |

4.REQUIREMENT ANALYSIS

4.1 Functional requirement

Functional Requirements:

Following are the functional requirements of the proposed solution.

| FR No. | Functional Requirement (Epic) | Sub Requirement (Story / Sub-Task) |
|--------|-------------------------------------|--|
| FR-1 | User Registration | Registration through Application Registration through Gmail |
| FR-2 | User Confirmation | Confirmation via Email Confirmation via OTP |
| FR-3 | User monthly expense tentative data | Data to be registered in the app |
| FR-4 | User monthly income data | Data to be registered in the app |
| FR-5 | Alert/ Notification | Alert through E-mail Alert through SMS |
| FR-6 | User Budget Plan | Planning and Tracking of user expense vs budget limit |

4.2 Non-Functional requirements

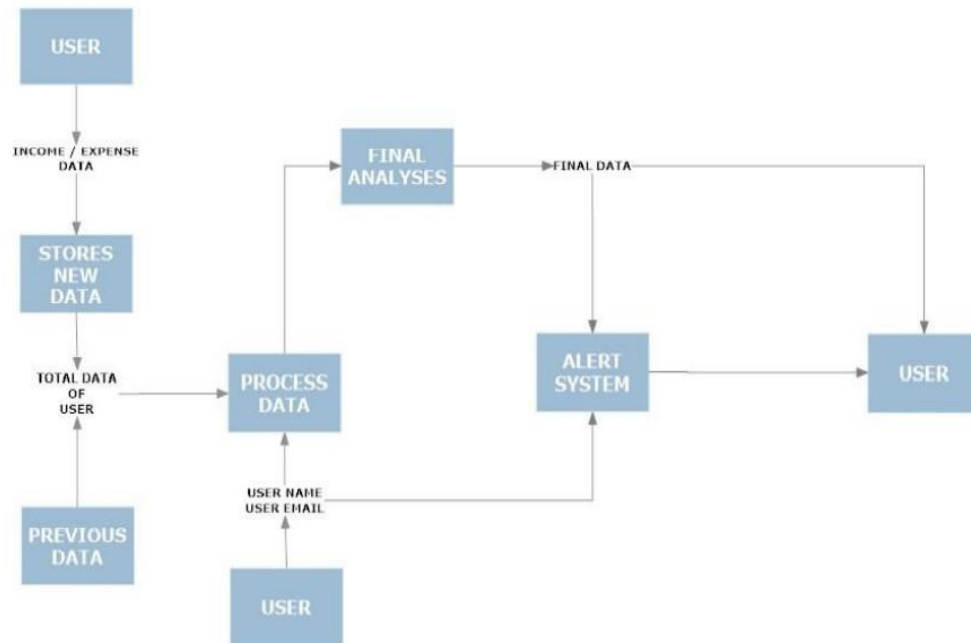

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

| FR No. | Non-Functional Requirement | Description |
|--------|----------------------------|---|
| NFR-1 | Usability | Effectiveness, efficiency and overall satisfaction of the user while interacting with our application. |
| NFR-2 | Security | Authentication, authorization, encryption of the application. |
| NFR-3 | Reliability | Probability of failure-free operations in a specified environment for a specified time. |
| NFR-4 | Performance | How the application is functioning and how responsive the application is to the end-users. |
| NFR-5 | Availability | Without near 100% availability, application reliability and the user satisfaction will affect the solution. |
| NFR-6 | Scalability | Capacity of the application to handle growth, especially in handling more users. |

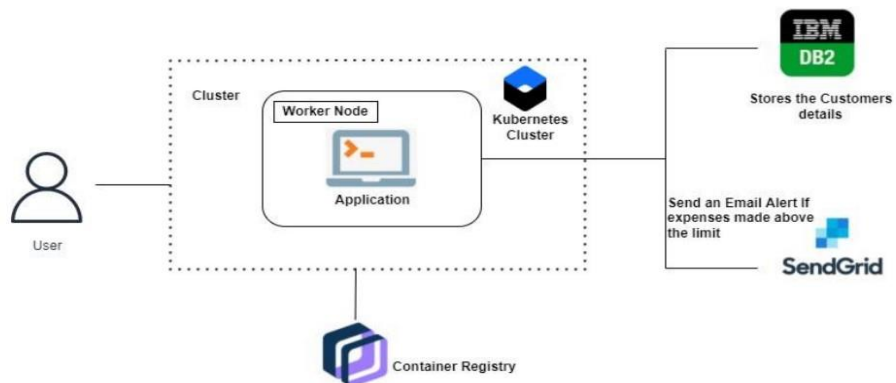

5.PROJECT DESIGN

5.1 Data Flow Diagrams

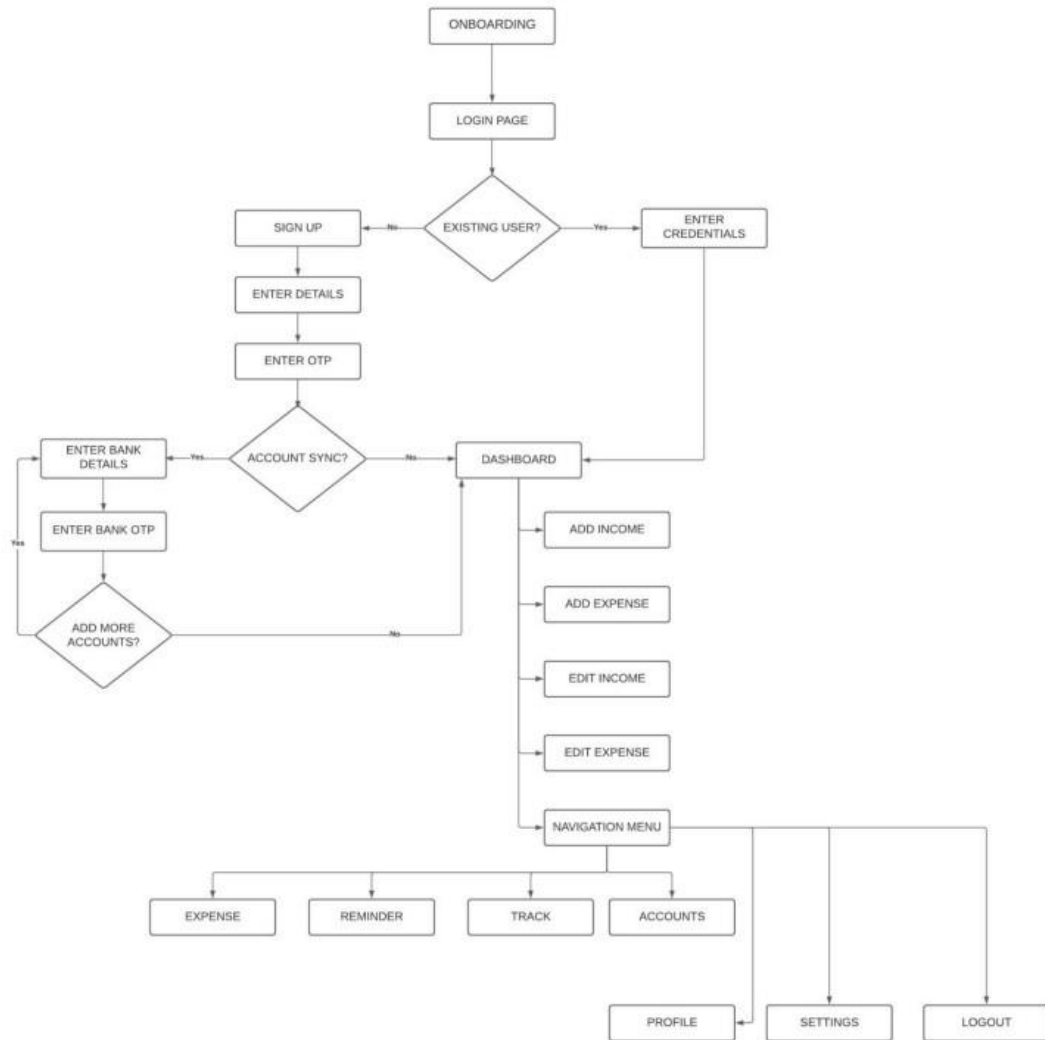

5.2 Solution & Technical Architecture

Technical Architecture:

Solution architecture:

5.3 User Stories

User Stories

Use the below template to list all the user stories for the product.

| User Type | Functional Requirement (Epic) | User Story Number | User Story / Task | Acceptance criteria | Priority | Release |
|---------------------------------------|-------------------------------|-------------------|---|---|----------|---------|
| Customer (Mobile user & web user) | Registration | USN-1 | As a user, I can register for the application by entering my email, password, and confirming my password. | I can access my account / dashboard | High | |
| | | USN-2 | As a user, I will receive confirmation email once I have registered for the application | I can receive confirmation email & click confirm | High | |
| | | USN- 3 | As a user, I can register for the application through Facebook | I can register & access the dashboard with Facebook Login | Low | |
| | Login | USN - 4 | As a user, I can log into the application by entering email & password | I can access the application | High | |
| | Dashboard | USN - 5 | As a user I can enter my income and expenditure details. | I can view my daily expenses | High | |
| Customer Care Executive | | USN – 6 | As a customer care executive I can solve the log in issues and other issues of the application. | I can provide support or solution at any time 24*7 | Medium | |
| Administrator | Application | USN - 7 | As a administrator I can upgrade or update the application. | I can fix the bug which arises for the customers and users of the application | Medium | |

6.PROJECT PLANNING & SCHEDULING

6.1 Sprint Planning & Estimation

Product Backlog, Sprint Schedule, and Estimation (4 Marks)

Use the below template to create product backlog and sprint schedule

| Sprint | Functional Requirement (Epic) | User Story Number | User Story / Task | Story Points | Priority | Team Members |
|----------|--|-------------------|---|--------------|----------|-----------------------|
| Sprint-1 | Registration | USN-1 | As a user, I can register for the application by entering my email, password, and confirming my password. | 8 | High | Rohith, Sam Jemil |
| Sprint-1 | Login | USN-2 | As a user, I can log into the application by entering email & password | 8 | High | Rengaraja, Sivasakthi |
| Sprint-2 | Add Expense | USN-3 | As a user, I can add the day-to-day expense to the application | 5 | Medium | Rohith, Sam Jemil |
| Sprint-2 | Edit and Delete Expense | USN-4 | As a user, I can edit and delete the previously created expense | 5 | Medium | Rengaraja, Sivasakthi |
| Sprint-3 | Creating time-based filters in history. | USN-5 | As a user, I can see the time-based history of expenses. | 8 | High | Rohith, Sam Jemil |
| Sprint-3 | Integrating with pie-charts for analysis | USN-6 | As a user, I can view diagrammatic representation of expenses | 5 | Medium | Rengaraja, Sivasakthi |
| Sprint-4 | Enabling limit feature | USN-7 | As a user, I can set monthly limit to expenses | 5 | Medium | Rohith, Sam Jemil |
| Sprint-4 | Sending Email Alerts | USN-8 | As a user, I will receive a mail if I cross a limit | 8 | High | Rengaraja, Sivasakthi |

Project Tracker, Velocity & Burndown Chart: (4 Marks)

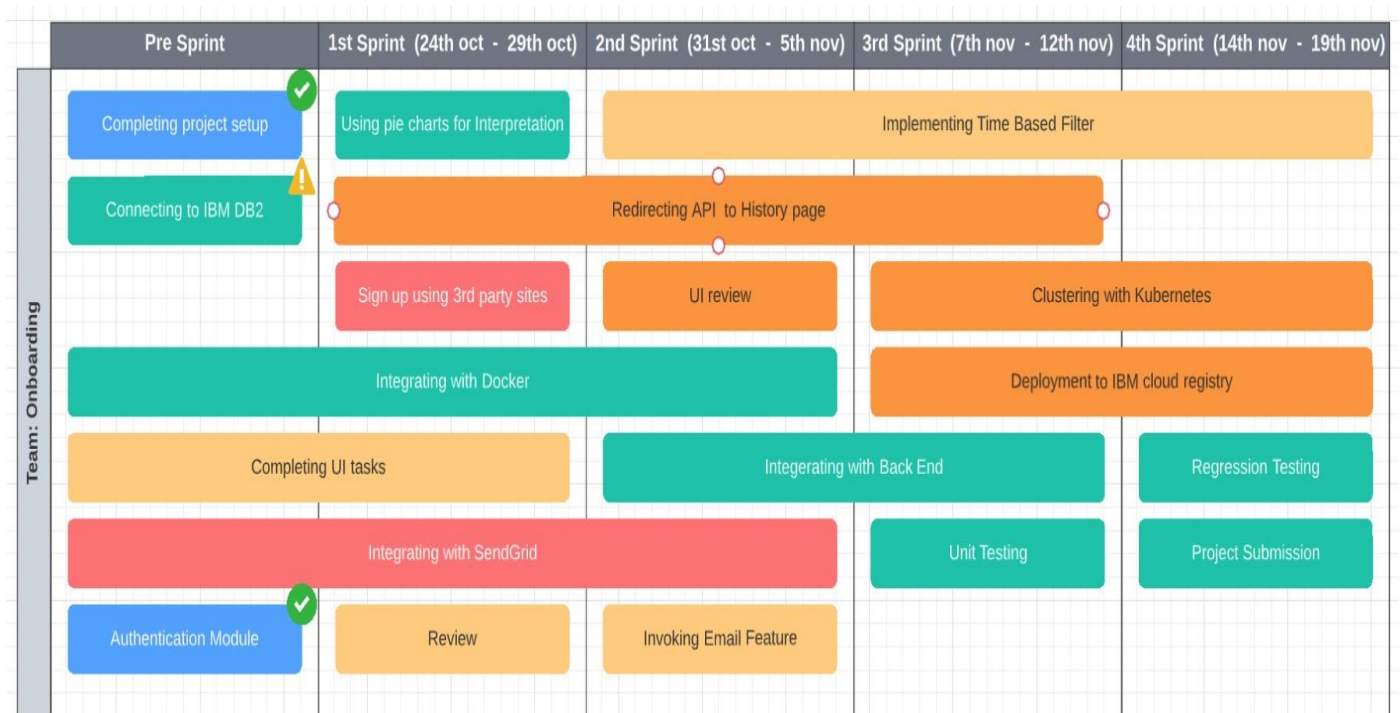

| Sprint | Total Story Points | Duration | Sprint Start Date | Sprint End Date (Planned) | Story Points Completed (as on Planned End Date) | Sprint Release Date (Actual) |
|----------|--------------------|----------|-------------------|---------------------------|---|------------------------------|
| Sprint-1 | 16 | 6 Days | 24 Oct 2022 | 29 Oct 2022 | 16 | 29 Oct 2022 |
| Sprint-2 | 12 | 6 Days | 31 Oct 2022 | 05 Nov 2022 | 10 | 05 Nov 2022 |
| Sprint-3 | 14 | 6 Days | 07 Nov 2022 | 12 Nov 2022 | 13 | 12 Nov 2022 |
| Sprint-4 | 14 | 6 Days | 14 Nov 2022 | 19 Nov 2022 | 13 | 19 Nov 2022 |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |

Velocity:

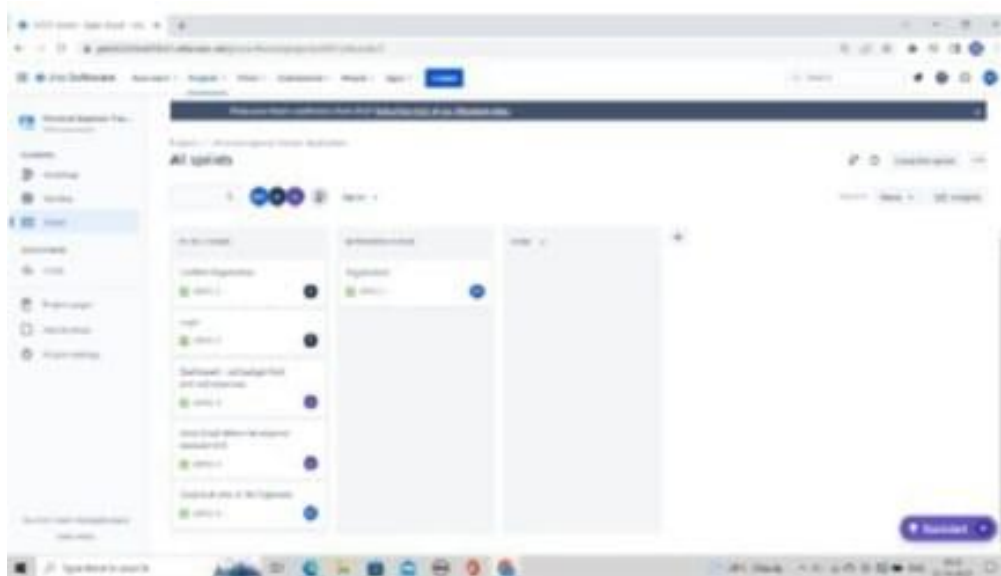

Imagine we have a 10-day sprint duration, and the velocity of the team is 20 (points per sprint). Let's calculate the team's average velocity (AV) per iteration unit (story points per day)

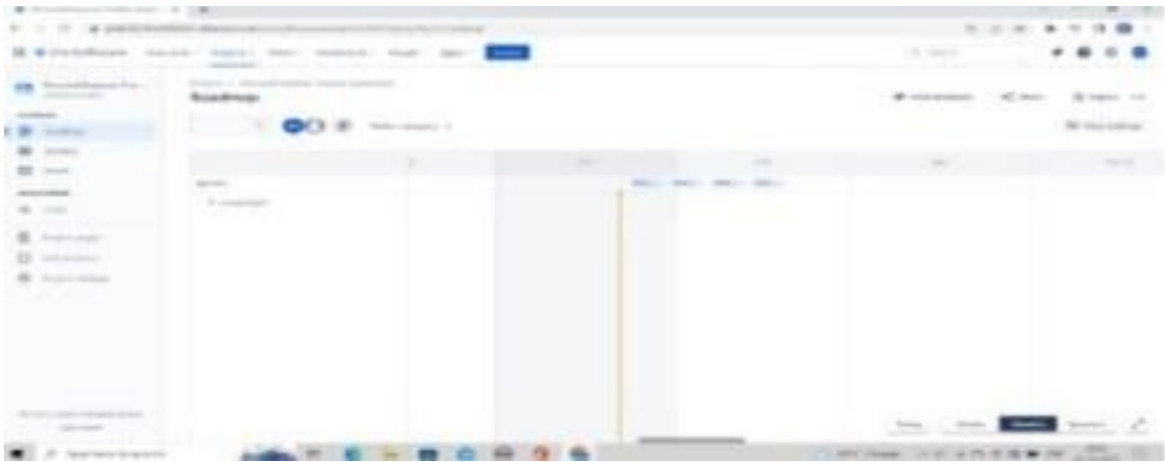

$$AV = \frac{\text{sprint duration}}{\text{velocity}} = \frac{20}{10} = 2$$

6.2 Sprint Delivery Schedule

6.3 Reports from JIRA

7.CODING & SOLUTIONING

7.1 Feature 1

We have added the data visualization on methods for expenditure. The pie chart have been used to represent the monthly expenses. The pie chart is a pictorial representation of data that makes it possible to visualize the relationships between the parts and the whole of a variable. For example, it is possible to understand the industry count or percentage of a variable level from the division by areas or sectors. The recommended use for pie charts is two-dimensional, as three-dimensional use can be confusing.

The dimensions form sectors of the measurement values; they can have one or two sizes and up to two measures. The first dimension is used to define the angle of each sector that makes up the chart and the second dimension optionally determines the radius of each sector. Additionally, these plots are useful for comparing data over a fixed period since they do not show changes over time. Therefore, their use should be considered if:

- You are looking to categorize and compare a set of data.
- You only have positive values.
- You have less than seven categories since a larger number can make it difficult to perceive each segment.

7.2 Feature 2

Email notifications will be sent to the users once they cross the expenditure limit through send grid mail system. Most notifications are transactional, meaning a recipient's action or account activity triggers them. But some notifications are marketing related, encouraging the recipient to take a specific action. Ecommerce product notifications inform recipients about new products or discounts. Plus, unlike general marketing emails, these are highly personalized and focus on a single product. For example, if a customer views an item on your website and that item goes on sale, you can send the customer a notification to let them know this is the best time to buy. Users can also opt into receiving notifications when an out-of-stock item is back in stock.

Notification emails tend to perform well because the content is highly relevant to the recipient. But the only way for the recipient to know this is if you state the content clearly in the subject line.

For example, the subject line "New Sign-in to Your Account" gets straight to the point, letting the user know why you sent this notification.

sendemail.py

```
import smtplib
import sendgrid as sg
import os
from sendgrid import SendGridAPIClient
from sendgrid.helpers.mail import Mail, Email, To, Content
SUBJECT = "personal expense tracker"
s = smtplib.SMTP('smtp.gmail.com', 587)

def sendmail(TEXT,email):
    from_email = Email("ramperumal123@gmail.com")
    to_email = To(email)
    subject = "Sending with SendGrid is Fun"
    content = Content("text/plain",TEXT)
```

```

mail = Mail(from_email, to_email, subject, content)
try:
    sg=SendGridAPIClient('SG.PJq2l00SRKyfdCTfm5b4XQ.I5p737Yx2imRbcRxykMCtRlq1
iZ7s0_cTEDwQbm8nI4')
    response = sg.send(mail)
    print(response.status_code)
    print(response.body)
    print(response.headers)
except Exception as e:
    print(e)

```

7.3 Database Schema

Tables :

1) Users

id INT NOT NULL GENERATED ALWAYS AS
IDENTITY, username VARCHAR(32) NOT NULL,
email VARCHAR(32) NOT NULL,
password VARCHAR(32) NOT NULL

2) BUDGET

id INT NOT NULL GENERATED ALWAYS AS IDENTITY,
user_id INT NOT NULL, date TIMESTAMP(12) NOT
NULL, expense_name VARCHAR(32) NOT NULL,
amount VARCHAR(32) NOT NULL,
pay_mode VARCHAR(32) NOT NULL,
category VARCHAR(32) NOT NULL

3) LIMIT

8.TESTING

8.1 Test Cases

| Test Case ID | Purpose | TestCases | Result |
|--------------|----------------|--|--|
| TC1 | Authentication | Password with length less than 4 characters | Password cannot be less than 4 characters |
| TC2 | Authentication | User name with length less than 2 characters | User name cannot be less than 2 characters |
| TC3 | Authentication | Valid user name with minimum 2 characters | User name accepted |

| | | | |
|-----|----------------|--|---|
| TC4 | Authentication | User name le blank | User name cannot be less than 2 characters |
| TC5 | Authentication | Password field le blank | Password cannot be empty |
| TC6 | Authentication | Minimum 4 characters valid password | Password accepted |
| TC7 | Authentication | Password and Confirm Password did not match | Please enter same password |
| TC8 | Authentication | Confirm Password field le blank | Please enter same password |

8.2 User Acceptance Testing

| Technical Requirement Document (TSD) | |
|--------------------------------------|--|
| Test Case ID | Test Case Description |
| TC_001 | Verify if user is able to order single product. |
| TC_002 | Verify if user is able to order multiple products. |
| TC_003 | Verify if user can apply single or multiple filters |
| TC_004 | Verify if user can apply different sort by |
| TC_005 | Verify if user is able to pay by Master Card |
| TC_006 | Verify if user is able to pay by Debit Card |
| TC_007 | Verify if user is able to pay fully by reward points |
| TC_008 | Verify if user is able to pay partially by reward points |

9.RESULTS

9.1 Performance Metrics

- Tracking income and expenses: Monitoring the income and tracking all expenditures (through bank accounts, mobile wallets, and credit & debit cards).
- Transaction Receipts: Capture and organize your payment receipts to keep track of your expenditure.
- Organizing Taxes: Import your documents to the expense tracking app, and it will streamline your income and expenses under the appropriate tax categories.
- Payments & Invoices: Accept and pay from credit cards, debit cards, net banking, mobile wallets, and bank transfers, and track the status of your invoices and bills in the mobile app itself. Also, the tracking app sends reminders for payments and automatically matches the payments with invoices.
- Reports: The expense tracking app generates and sends reports to give a detailed insight about profits, losses, budgets, income, balance sheets, etc.,
- E-commerce integration: Integrate your expense tracking app with your eCommerce store and track your sales through payments received via multiple payment methods.
- Vendors and Contractors: Manage and track all the payments to the vendors and contractors added to the mobile app.
- Access control: Increase your team productivity by providing access control to particular users through custom permissions.
- Track Projects: Determine project profitability by tracking labor costs, payroll, expenses, etc., of your ongoing project.

- **Inventory tracking:** An expense tracking app can do it all. Right from tracking products or the cost of goods, sending alert notifications when the product is running out of stock or the product is not selling, to purchase orders.
- **In-depth insights and analytics:** Provides in-built tools to generate reports with easy-to-understand visuals and graphics to gain insights about the performance of your business.
- **Recurrent Expenses:** Rely on your budgeting app to track, streamline, and automate all the recurrent expenses and remind you on a timely basis.

10.ADVANTAGES & DISADVANTAGES

1. **Achieve your business goals** with a tailored mobile app that perfectly fits your business.
2. **Scale-up** at the pace your business is growing.
3. Deliver an **outstanding** customer experience through additional control over the app.
4. Control the **security** of your business and customer data
5. Open **direct marketing channels** with no extra costs with methods such as push notifications.
6. **Boost the productivity** of all the processes within the organization.
7. Increase **efficiency** and **customer satisfaction** with an app aligned to their needs.
8. **Seamlessly integrate** with existing infrastructure.
9. Ability to provide **valuable insights**.
10. Optimize sales processes to generate **more revenue** through enhanced data collection.

11.CONCLUSION

From this project, we are able to manage and keep tracking the daily expenses as well as income. While making this project, we gained a lot of experience of working as a team. We discovered various predicted and unpredicted problems and we enjoyed a lot solving them as a team. We adopted things like video tutorials, text tutorials, internet and learning materials to make our project complete.

12.FUTURE

The project assists well to record the income and expenses in general. However, this project has some limitations:

- The application is unable to maintain the backup of data once it is uninstalled.
- This application does not provide higher decision capability.

To further enhance the capability of this application, we recommend the following features to be incorporated into the system:

- Multiple language interface.
- Provide backup and recovery of data.
- Provide better user interface for user.
- Mobile apps advantage.
